

Robots Enter the World of Jobs
By Penelope Pell

Humans work in hospitals, labs, and schools
Robots developed a lot of their tools.
Stethoscopes, microscopes, and computers
Scientists are their creators and tutors.

Thanks to humans robots can
Fill a gap left by man.
Farming, building, drawing too,
Robots make the job look new.

Don't worry, it'll be fine
As we'll get to our jobs on time,
And work beside our robot friends
Our technology revolution will never end.
